

Eye Kandy comes in 60 colors and 2 different “flavors” – Sprinkles (#1-40, 51-54, 56-60) and Sugars (#41-50, 55). Sprinkles are bold color that can be used as a liner or shadow. Sugars are sheerer than sprinkles and are great to highlight and accent. Sprinkles are either Fine(F) or Super Fine (SF) although some colors are available both ways. Fine is a large flake with a more “flash” and the super fine is a subtler glitter.

We offer two cuts of glitter in our solid liners.

**Superfine (SF)** - The first, and by far our most popular due to the ease of applying, is our SF. The grain size of this glitter is our smallest, ranging in size from a .004 x .004 to a .006 x .006. This size of glitter does not offer as much sparkle, so tends to be less dramatic, but is still brilliant and stunning to wear. It is a great cut for a day or ‘office’ look and works beautifully as an all over eye shadow and lip shimmer.

**Fine (F)**- Our second cut is F. This is our largest grain at .008 x .008. This size glitter picks up the most light, and, therefore, is definitely the most flashy and exciting to wear! This size tends to be more popular with the performing crowd. It shines and sparkles and offers all the ‘bling’ you need! This is a great cut for a bright, bold and fun look.

Our final glitter selection is our Sugars

**Sugars (#41-50, 55) Sugars** - The Sugars are also a .008 x .008 grain size. However, the sugars are not solid colors. This type of glitter is a translucent, iridescent plastic grain which offers a hint of color. The Sugars are very difficult to use as liners and are actually intended to transform the eyelid or desired area of skin into a glitter. The Sugars are also incredible for stage performers, but look beautiful and are fun to wear as an everyday eye shadow.

**1. Jawbreaker SF**  
A beautiful Silver

**30. Candy Apple**
